Decarbonisation

Our activities

Corporate Carbon Footprint (CCF)

Since 2021, we have been calculating our carbon footprint according to the Greenhouse Gas Protocol (GHG) in all three scopes.

Reduction targets

We want to reduce our Scope 1&2 emissions by 45% by 2030 (base year 2021). From 2045, we want our production to be CO₂-neutral. We will achieve this mainly by purchasing green electricity, implementing energy efficiency measures and generating our own electricity.

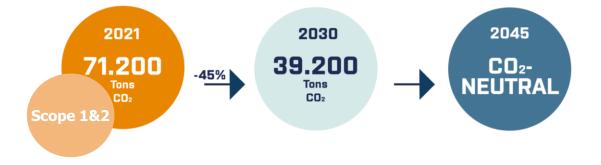

PCF & LCA

Since 2024, we have been calculating product carbon footprints (PCF) for our products in accordance with ISO standard 14067 and life cycle assessments (LCA) in accordance with ISO standards 14040 and 14044.

Green Electricity

We have focused our energy purchasing on the procurement of green electricity. The conclusion of power purchase agreements (PPAs) is particularly important to achieve a 70 % share of green electricity by 2030.

Communication

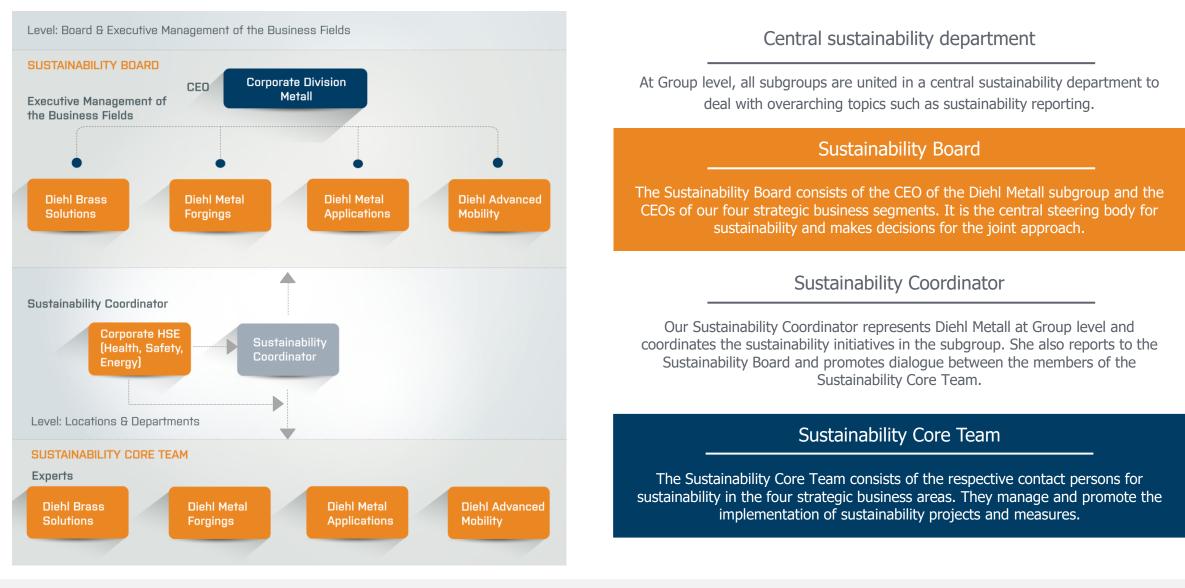

If you would like to find out more about our work in the area of sustainability, you can visit the <u>Diehl Group</u> or <u>Diehl Metall</u> website.

Organisation

Internal sustainability organisation at Diehl Metall

We have our sites certified in accordance with internationally recognised standards that relate to the overall sustainability picture.

In this way, we create transparency about our activities for a responsible approach to the environment, for optimising our energy consumption and for the health and safety of our employees.
