

"It is important to me that we continue to be a **technological leader** in the future. That's why I am with Diehl."

MAKE IT WORK

Validation Test Engineer (m/w/d)

These are your tasks:

- You will be responsible for test analysis, test design, test implementation, test execution and test completion within the framework of development projects in the field of validation at the system and acceptance test level.
- You will maintain our product portfolio at the highest quality level, you will conduct product failure analyses related to production issues or customer complaints.
- You will be responsible for the planning, execution, analysis and completion of periodic control tests for already existing products in the market.
- You bring testing experience and a high level of motivation to the validation team to support our strategic growth area at Diehl Metering regarding connectivity and solutions.
- You are in close exchange with developers and testers from different disciplines within the development area to support the early integration of the developed solution into the Diehl Metering System as early as possible.

Who we are looking for:

- You have successfully completed a degree in computer science, electrical engineering, or a comparable field.
- Ideally, you have several years of professional experience in testing electronic products in the development field.
- You are resilient and adaptable in dealing with time and cost pressure, can communicate skillfully, are empathetic, and open to new challenges.
- Very good English skills as well as openness to international collaboration complete your profile.
- An ISTQB Certified Tester certification is a plus.
